DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a method to assay PARP comprising contacting auto-ribosylated Parp with a detectable marker indicative of PARP activity classified in class 435, subclass 174.
 - II. Claim 4, drawn to a method to assay PARP activity comprising contacting auto-ribosylated PARP with an avidin-conjugated alkaline phosphatase, classified in class 436, subclass 518.
 - III. Claims 5-7, drawn to a method to identify a modulator of PARP comprising a biotinylated NAD classified in class 435, subclass 7.5.
 - IV. Claim 8 is drawn to a method to identify a modulator of PARP activity comprising avidin-conjugated alkaline phosphatase, classified in class 435, subclass 188.
 - V. Claims 9-10 is drawn to a kit comprising a biotinylated detectable marker, classified in class 435, subclass 975.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I-IV are unrelated methods. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different

modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have a different mode of operation. Group 1 is related to a method to assay PARP comprising a detectable marker, group II is drawn to a method to assay PARP comprising using an alkaline phosphatase, group III is drawn to a method to identify a modulator of PARP comprising using a biotinylated NAD, group IV is drawn to a method to identify a modulator of PARP comprising an avidin-conjugated alkaline phosphatase. The methods of groups I and II are unrelated because they utilize different reagents such as an alkaline phosphatase which is a reagent not required by group I. The methods of groups III and IV are unrelated to groups I and II because they are drawn to methods to identify a modulator which utilize different methods steps. Although the methods of groups III and IV are both drawn to a method of identifying a modulator, they are different in that they utilize different reagents such as an alkaline phosphatase in the method of group IV which is a reagent not required by group III.

2. Inventions (V) and (I-IV) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the products can be practiced by any of the methods of groups I through IV.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper. Please note that classifications in the restriction are illustrative only and do not represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches, therefore restriction for examination purposes as indicated proper.

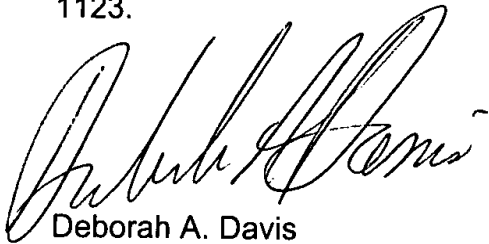

45. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
